

GCCAP SAMPLE EXPORT

Insurer / Legal Evidence Pack

A structured evidence export for claims, incident review and liability-context assessment.

Evidence	Timeline	Confidence	Boundary
Complete	Mapped	96%	Review
Raw record retained	Stage-level	Source return	No liability finding

Purpose

This export helps claims teams, legal reviewers and risk stakeholders understand what evidence exists, what was observed, when it occurred and what limitations apply.

Responsibility boundary

GCCAP does not determine liability. The package supports review by preserving source records, separating timestamps and identifying the stage in which an exception occurred.

Evidence pack contents

Layer	Included	Why it matters
Raw source record	Yes	Supports re-checking and audit review
Measurement timestamps	Yes	Separates sensor time from report time
Cart-to-flight alignment	Yes	Links cart journey to operational context
Exception window	Yes	Defines exposure duration and peak
Limitation statement	Yes	Prevents unsupported conclusions

Evidence package boundary

This representative export is designed to show the expected GCCAP report structure: stage evidence, exception logic, source-retention reference, confidence and review boundaries. Client-facing versions use GCCAP Sensor, GCCAP Gateway and GCCAP Evidence Package naming only.
