

Sample Sealed Evidence Package

Representative evidence package for a single airline catering ground leg.

This public GCCAP document is an evidence support asset. It does not certify food safety, declare legal compliance, assign fault or replace client, auditor, insurer, regulator or legal review.

Sample package purpose

This representative sample shows how a ground leg can be turned into a human-readable PDF and a structured evidence export.

Human review	A quality, airline, insurer or operations reviewer can see the journey, event window and limits.
Technical review	A JSON export can preserve structure for verification and future system integration.
Integrity concept	A sealed or hashed package makes later alteration easier to detect.

Representative journey summary

The sample is simulated and shows structure only.

Cart context	One cart, one dispatch, one ground leg and one review event.
Event context	A temperature review window is tied to a journey stage and timestamp range.
Report boundary	Observed evidence and limits only. No liability, fault or food-safety certification.

Package contents

A useful package connects the record, not just the graph.

Timeline	Custody stages, timestamps, temperature trend and event window.
Data quality	Coverage, gaps, delayed records and mapping confidence.
Exports	Client PDF plus structured JSON where applicable.

Sample Sealed Evidence Package

Review boundary: GCCAP reports observed behaviour, data quality and evidence limits. Live client exports require validated hardware, approved site access and agreed governance controls.
